

## BIO-TAPES

80mm x 30mm (25mm x 30mm sampling area)

Bio-Tape slides provide a convenient way of surface sampling for contaminants. Through the use of Bio-Tapes, identification and degree of the contaminants can be made. The Bio-tape works especially well on flat smooth surfaces.

A Bio-Tape consists of a flexible plastic microscope slide with an adhesive area, which is used to capture the sample. It also has a description label for identification and a plastic holder case.

### APPLICATIONS:

- Mould sampling and testing

### FEATURES:

- Consistent, standardized way for surface sampling
- Easier to handle than using a piece of tape, increasing accuracy
- Label for easy identification
- Protective case for each slide, to prevent cross-contamination
- Easier lab prep
- Ideal for mould testing

Notes: Adhesive could pull off paint if left on for too long
